

Wisewood™ timber – where quality meets compassion

Saw timber from Wisewood Ltd fulfils the most demanding quality controls. But **Wisewood™** timber products represent more than just raw materials: our wood comes from specially managed forests that use native tree species and are never clearcut.

Wisewood™ timber brings a new dimension of sustainability to forestry: commercial forests that retain the "feel" of forest as well as their recreational and natural values. To buy a **Wisewood™** product is to be part of a compassionate and responsible trade chain extending from forest owner to the consumer.

Wisewood™ timber is sourced from FSC-certified forests managed or inspected by Innofor Finland Ltd.

Read more why wood products made of **Wisewood™** interest clients:

Wisewood™ timber — the most socially and environmentally responsible wood source commercially available

Both forests above have recently been logged. On the left is a forest managed using non-clearcut methods utilised by Innofor Finland Ltd¹. On the right is a clearcut stand, which has lost its recreational and natural values for decades or more. Non-clearcut methods are commercially viable but more demanding than conventional forestry. Young trees starting off in the shade of larger ones grow straight and branchless lower trunks, providing the best knot-free timber. Only some mature trees are cut at a time, the forest is never cleared.

As well as providing finest saw timber quality, non-clearcut forestry offers overwhelming social and environmental advantages for local communities, including retaining landscape features important for recreation and tourism, for game management, and for wildlife.

Wisewood™ timber comes from forests managed or inspected by Innofor Finland Ltd. Experts praise Innofor's innovative forestry approach:

- The **Wisewood™** manufacturing chain encourages the use of wood for production of long-lasting quality products.
- Innofor's non-clearcut forestry keeps intact forest landscapes and preserves their recreational values.
- Forest habitats important for wildlife are conserved better when their surroundings are not clearcut.
- The biggest oldest trees are left uncut, giving the forest majesty. Old trees are also important habitats for many forest plants and animals.
- Innofor recommends voluntary protection of biologically exceptional sites, and helps owners look for compensation schemes.

“Innofor Finland Ltd's methods represent a significant improvement to Finnish forestry standards.* ”

– Silva Verde GmbH, independent assessment of Innofor Finland Ltd's forestry policy.

Wisewood™ timber grades

Quality grade A for demanding joinery

Wisewood™ grade A saw timber is available in Scots pine, spruce, birch and aspen. Other woods available soon.

Moisture content and minimum export order by agreement.

Wisewood™ timber grades apply the Nordic grading rules A1-A4, B, C. For more information, see www.stmy.fi

A, B and C grades for construction and interiors.

Wisewood™ quality grades B and C are available in Scots pine, spruce, birch and aspen. Other woods available soon.

Moisture content and minimum export order by agreement.

Wisewood™ construction timber strengths are evaluated visually according to Finnish standard SFS 5878 INSTA 142, or by agreement using standard tensile strength tests.

Wisewood™ planed timber and plywood products

Wisewood™ timber is available planed, and by agreement as boards or plywood.

**Wisewood™ quality timber
from non-clearcut forests**

The production of Wisewood is independently verified as one of the most sustainable forest management solutions. Buying long-lasting wood products also fixes carbon, helping to combat climate change.
